Gene Information

Gene Official Full Name	phosphodiesterase 8Aprovided by HGNC
Also known as	HsT19550
Gene Description	The protein encoded by this gene belongs to the cyclic nucleotide phosphodiesterase (PDE) family, and PDE8 subfamily. This PDE hydrolyzes the second messenger, cAMP, which is a regulator and mediator of a number of cellular responses to extracellular signals. Thus, by regulating the cellular concentration of cAMP, this protein plays a key role in many important physiological processes. Alternatively spliced transcript variants encoding different isoforms have been found for this gene.[provided by RefSeq, Jul 2011]
Expression	Ubiquitous expression in colon (RPKM 9.5), kidney (RPKM 8.2) and 25 other tissues See more
