Gene Information	
Gene Official Full Name	complement C1sprovided by HGNC
Also known as	EDSPD2
Gene Description	This gene encodes a serine protease, which is a major constituent of the human complement subcomponent C1. C1s associates with two other complement components C1r and C1q in order to yield the first component of the serum complement system. Defects in this gene are the cause of selective C1s deficiency. Expression	Broad expression in liver (RPKM 683.7), gall bladder (RPKM 363.8) and 18 other tissues See more
