Gene Information	
Gene Official Full Name	methylmalonyl-CoA epimerase provided by HGNC
Also known as	MCE; MMCE; GLOD2
Gene Description	The product of this gene catalyzes the interconversion of D- and L-methylmalonyl-CoA during the degradation of branched chain amino acids, odd chain-length fatty acids, and other metabolites. Mutations in this gene result in methylmalonyl-CoA epimerase deficiency, which is presented as mild to moderate methylmalonic aciduria. [provided by RefSeq, Jul 2008]
Expression	Ubiquitous expression in liver (RPKM 12.0), kidney (RPKM 11.0) and 25 other tissues See more
