Gene Information	
Gene Official Full Name	Cbl proto-oncogene like 1provided by HGNC
Also known as	HAKAI; RNF188
Gene Description	This gene encodes an E3 ubiquitin-ligase for the E-cadherin complex and mediates its ubiquitination, endocytosis, and degradation in the lysosomes. The encoded protein contains a RING-finger domain and is also thought to have a role in control of cell proliferation. A related pseudogene has been identified on chromosome X. Alternative splicing results in a non-coding transcript variant. [provided by RefSeq, Aug 2011]
Expression	Ubiquitous expression in colon (RPKM 9.2), testis (RPKM 4.9) and 25 other tissues See more
