Gene Information	
Gene Official Full Name	FEZ family zinc finger 1 provided by HGNC
Also known as	FEZ; HH22; ZNF312B
Gene Description	This gene encodes a transcriptional repressor that belongs to the zinc finger double domain protein family. The encoded protein is thought to play a role in the embryonic migration of gonadotropin-releasing hormone neurons into the brain. Mutations in this gene are associated with hypogonadotropic hypogonadism-22 with anosmia. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Oct 2014]
Expression	Restricted expression toward testis (RPKM 1.2) See more
