| Gene Official Full Name | ribonuclease P/MRP subunit p25 like provided by HGNC |
| Also known as | C9orf23; bA296L22.5 |
| Gene Description | This gene encodes a protein that appears to belong to a family of evolutionarily related proteins (DUF78), that may share one or more domains in common. Members of this family are small archaeobacterial proteins with no known function. Alternative splicing has been observed at this locus and two variants, both encoding the same protein, have been identified. [provided by RefSeq, Jul 2008] |
| Expression | Ubiquitous expression in duodenum (RPKM 9.6), prostate (RPKM 9.4) and 25 other tissues See more |
