Gene Information	
Gene Official Full Name	TNF receptor associated factor 7provided by HGNC
Also known as	RFWD1; RNF119; CAFDADD
Gene Description	Tumor necrosis factor (TNF; see MIM 191160) receptor-associated factors, such as TRAF7, are signal transducers for members of the TNF receptor superfamily (see MIM 191190). TRAFs are composed of an N-terminal cysteine/histidine-rich region containing zinc RING and/or zinc finger motifs; a coiled-coil (leucine zipper) motif; and a homologous region that defines the TRAF family, the TRAF domain, which is involved in self-association and receptor binding.[supplied by OMIM, Apr 2004]
Expression	Ubiquitous expression in duodenum (RPKM 19.0), esophagus (RPKM 17.7) and 25 other tissues See more
