Gene Information	
Gene Official Full Name	mex-3 RNA binding family member Bprovided by HGNC
Also known as	RKHD3; MEX-3B; RNF195
Gene Description	This gene encodes an RNA-binding phosphoprotein that is part of the MEX3 (muscle excess 3) family of translational regulators. The encoded protein contains N-terminal nuclear export and nuclear localization signals and is exported from the cytoplasm to the nucleus. The protein binds to RNA via two KH domains and also colocalizes with MEX3A, Dcp1A decapping factor and Argonaute proteins within P (processing) bodies. [provided by RefSeq, Oct 2012]
Expression	Biased expression in testis (RPKM 20.7), endometrium (RPKM 5.5) and 7 other tissues See more
