Gene Information	
Gene Official Full Name	cell division cycle associated 7provided by HGNC
Also known as	ICF3; JPO1
Gene Description	This gene was identified as a c-Myc responsive gene, and behaves as a direct c-Myc target gene. Overexpression of this gene is found to enhance the transformation of lymphoblastoid cells, and it complements a transformation-defective Myc Box II mutant, suggesting its involvement in c-Myc-mediated cell transformation. Two alternatively spliced transcript variants encoding distinct isoforms have been reported. [provided by RefSeq, Jul 2008]
Expression	Broad expression in lymph node (RPKM 15.2), duodenum (RPKM 15.1) and 14 other tissues See more
