Gene Information	
Gene Official Full Name	golgi phosphoprotein 3provided by HGNC
Also known as	GOPP1; GPP34; MIDAS; Vps74
Gene Description	The Golgi complex plays a key role in the sorting and modification of proteins exported from the endoplasmic reticulum. The protein encoded by this gene is a peripheral membrane protein of the Golgi stack and may have a regulatory role in Golgi trafficking. Several alternatively spliced transcript variants of this gene have been described, but the full-length nature of these variants has not been determined. [provided by RefSeq, Jul 2008]
Expression	Ubiquitous expression in gall bladder (RPKM 38.1), prostate (RPKM 32.0) and 25 other tissues See more
