Gene Information	
Gene Official Full Name	double zinc ribbon and ankyrin repeat domains 1 provided by HGNC
Also known as	ANKRD64; C20orf12; C20orf84
Gene Description	This gene contains two ankyrin repeat-encoding regions. Ankyrin repeats are tandemly repeated modules of about 33 amino acids described as L-shaped structures consisting of a beta-hairpin and two alpha-helices. Ankyrin repeats occur in a large number of functionally diverse proteins, mainly from eukaryotes, and are known to function as protein-protein interaction domains. [provided by RefSeq, Dec 2018]
