Gene Information	
Gene Official Full Name	glucocorticoid modulatory element binding protein 2 provided by HGNC
Also known as	PIF79; GMEB-2; P79PIF
Gene Description	This gene is a member of KDWK gene family. The product of this gene associates with GMEB1 protein, and the complex is essential for parvovirus DNA replication. Study of rat homolog implicates the role of this gene in modulation of transactivation by the glucocorticoid receptor bound to glucocorticoid response elements. This gene appears to use multiple polyadenylation sites. [provided by RefSeq, Jul 2008]
Expression	Ubiquitous expression in bone marrow (RPKM 6.7), testis (RPKM 6.1) and 25 other tissues See more
