Gene Information	
Gene Official Full Name	malonyl-CoA decarboxylase provided by HGNC
Also known as	MCD
Gene Description	The product of this gene catalyzes the breakdown of malonyl-CoA to acetyl-CoA and carbon dioxide. Malonyl-CoA is an intermediate in fatty acid biosynthesis, and also inhibits the transport of fatty acyl CoAs into mitochondria. Consequently, the encoded protein acts to increase the rate of fatty acid oxidation. It is found in mitochondria, peroxisomes, and the cytoplasm. Mutations in this gene result in malonyl-CoA decarboxylase deficiency. [provided by RefSeq, Jul 2008]
Expression	Ubiquitous expression in heart (RPKM 24.2), liver (RPKM 11.1) and 24 other tissues See more
