Gene Information	
Gene Official Full Name	RAP1 GTPase activating protein 2provided by HGNC
Also known as	GARNL4; RAP1GA3
Gene Description	This gene encodes a GTPase-activating protein that activates the small guanine-nucleotide-binding protein Rap1 in platelets. The protein interacts with synaptotagmin-like protein 1 and Rab27 and regulates secretion of dense granules from platelets at sites of endothelial damage. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Sep 2009]
Expression	Ubiquitous expression in brain (RPKM 11.5), bone marrow (RPKM 10.7) and 24 other tissues See more
