Gene Information	
Gene Official Full Name	TYRO3 protein tyrosine kinase provided by HGNC
Also known as	BYK; Dtk; RSE; Rek; Sky; Tif; Etk-2
Gene Description	The gene is part of a 3-member transmembrane receptor kinase receptor family with a processed pseudogene distal on chromosome 15. The encoded protein is activated by the products of the growth arrest-specific gene 6 and protein S genes and is involved in controlling cell survival and proliferation, spermatogenesis, immunoregulation and phagocytosis. The encoded protein has also been identified as a cell entry factor for Ebola and Marburg viruses. [provided by RefSeq, May 2010]
Expression	Broad expression in ovary (RPKM 23.1), brain (RPKM 22.4) and 14 other tissues See more
