Gene Information	
Gene Official Full Name	DENN domain containing 2B provided by HGNC
Also known as	ST5; HTS1; p126
Gene Description	This gene was identified by its ability to suppress the tumorigenicity of HeLa cells in nude mice. The protein encoded by this gene contains a C-terminal region that shares similarity with the Rab 3 family of small GTP binding proteins. This protein preferentially binds to the SH3 domain of c-Abl kinase, and acts as a regulator of MAPK1/ERK2 kinase, which may contribute to its ability to reduce the tumorigenic phenotype in cells. Three alternatively spliced transcript variants of this gene encoding distinct isoforms are identified. [provided by RefSeq, Jul 2008]
Expression	Ubiquitous expression in endometrium (RPKM 30.7), testis (RPKM 16.0) and 24 other tissues See more
