Gene Information	
Gene Official Full Name	TBC1 domain family member 32 provided by HGNC
Also known as	BROMI; C6orf170; C6orf171
Gene Description	This gene encodes a TBC-domain containing protein. Studies of a similar protein in mouse and zebrafish suggest that the encoded protein is involved in sonic hedgehog signaling, and that it interacts with and stabilizes cell cycle-related kinase. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Jul 2014]
Expression	Broad expression in testis (RPKM 1.8), skin (RPKM 0.8) and 23 other tissues See more
